Contents

This lecture will cover:

- What is a digital image?
- What is digital image processing?
- History of digital image processing
- State of the art examples of digital image processing
- Key stages in digital image processing

What is a Digital Image?

Images taken from Gonzalez & Woods, Digital Image Processing (2002)

4

of

36

A **digital image** is a representation of a twodimensional image as a finite set of digital values, called picture elements or pixels

Pixel values typically represent gray levels, colours, heights, opacities etc **Remember** *digitization* implies that a digital image is an *approximation* of a real scene

Common image formats include:

- 1 sample per point (B&W or Grayscale)
- 3 samples per point (Red, Green, and Blue)
- 4 samples per point (Red, Green, Blue, and "Alpha", a.k.a. Opacity)

For most of this course we will focus on grey-scale images

Digital image processing focuses on two major tasks

- Improvement of pictorial information for human interpretation
- Processing of image data for storage, transmission and representation for autonomous machine perception

Some argument about where image processing ends and fields such as image analysis and computer vision start

The continuum from image processing to computer vision can be broken up into low-, mid- and high-level processes

8

of

36

Low Level Process	Mid Level Process	High Level Process
Input: Image Output: Image	Input: Image Output: Attributes	Input: Attributes Output: Understanding
Examples: Noise removal, image sharpening	Examples: Object recognition, segmentation	Examples: Scene understanding, autonomous navigation

In this course we will stop here

History of Digital Image Processing

Early 1920s: One of the first applications of digital imaging was in the news-paper industry

 The Bartlane cable picture transmission service

Early digital image

- Images were transferred by submarine cable between London and New York
- Pictures were coded for cable transfer and reconstructed at the receiving end on a telegraph printer

History of DIP (cont...)

10

of

36

Mid to late 1920s: Improvements to the Bartlane system resulted in higher quality images

- New reproduction processes based on photographic techniques
- Increased number
 of tones in
 reproduced images

Early 15 tone digital image 11

of

36

1960s: Improvements in computing technology and the onset of the space race led to a surge of work in digital image processing

- 1964: Computers used to improve the quality of images of the moon taken by the *Ranger 7* probe
- Such techniques were used in other space missions including the Apollo landings

A picture of the moon taken by the Ranger 7 probe minutes before landing

History of DIP (cont...)

1970s: Digital image processing begins to be used in medical applications

- **1979:** Sir Godfrey N. Hounsfield & Prof. Allan M. Cormack share the Nobel Prize in medicine for the invention of tomography, the technology behind **Computerised Axial** Tomography (CAT) scans

36

taken from Gonzalez & Woods, Digital Image Processing (2002)

Images

1980s - Today: The use of digital image processing techniques has exploded and they are now used for all kinds of tasks in all kinds of areas

- Image enhancement/restoration
- Artistic effects
- Medical visualisation
- Industrial inspection
- Law enforcement
- Human computer interfaces

14 of 36

Examples: Image Enhancement

One of the most common uses of DIP techniques: improve quality, remove noise etc

Examples: The Hubble Telescope

Launched in 1990 the Hubble telescope can take images of very distant objects However, an incorrect mirror made many of Hubble's

images useless

Image processing techniques were used to fix this

Wide Field Planetary Camera 1

Examples: Artistic Effects

Artistic effects are used to make images more visually appealing, to add special effects and to make composite images

16

of

Take slice from MRI scan of canine heart, and find boundaries between types of tissue

- Image with gray levels representing tissue density
- Use a suitable filter to highlight edges

Original MRI Image of a Dog Heart

Edge Detection Image

17

of

Examples: GIS

Geographic Information Systems

- Digital image processing techniques are used extensively to manipulate satellite imagery
- Terrain classification
- Meteorology

18

of

Examples: GIS (cont...)

Night-Time Lights of the World data set

- Global inventory of human settlement
- Not hard to imagine the kind of analysis that might be done using this data

19

of

Examples: Industrial Inspection

20

of

36

Human operators are expensive, slow and unreliable

Make machines do the job instead

Industrial vision systems are used in all kinds of industries

Can we trust them?

Printed Circuit Board (PCB) inspection

21

of

- Machine inspection is used to determine that all components are present and that all solder joints are acceptable
- Both conventional imaging and x-ray imaging

Examples: Law Enforcement

Processing (2002) & Woods, Digital Image taken from Gonzalez mages

22

of

36

Image processing techniques are used extensively by law enforcers

- Number plate recognition for speed cameras/automated toll systems
- Fingerprint recognition
- Enhancement of CCTV images

Examples: HCI

Try to make human computer interfaces more natural

– Face recognition

23

of

36

- Gesture recognition

Does anyone remember the user interface from "Minority Report"?

These tasks can be extremely difficult

Key Stages in Digital Image Processing

²⁵ Key Stages in Digital Image Processing: ³⁶ Image Aquisition

²⁶ Key Stages in Digital Image Processing: ³⁶ Image Enhancement

Key Stages in Digital Image Processing: 27 of Image Restoration 36

²⁸ Key Stages in Digital Image Processing: ³⁶ Morphological Processing

²⁹ ^{of} ³⁶ Key Stages in Digital Image Processing: Segmentation

³⁰ Key Stages in Digital Image Processing: ³⁶ Object Recognition

³¹ Key Stages in Digital Image Processing: ³⁶ Representation & Description

Key Stages in Digital Image Processing: Image Compression

32

of

³³ Key Stages in Digital Image Processing: ³⁶ Colour Image Processing

Summary

We have looked at:

34

Of

- What is a digital image?
- What is digital image processing?
- History of digital image processing
- State of the art examples of digital image processing
- Key stages in digital image processing Next time we will start to see how it all works...
